Examination and ClassPad Tips and Tricks
With the ClassPad in mind we will look at last year’s Year 12 examination papers and discuss the best 10 calculator skills to have in order to make it a worthwhile resource. We will also cover some useful tips and tricks when using the calculator as well as using the shift key to automate some of the more commonly used functions. Some time will be spent covering the newest additions to the latest operating system (ver. 3.05) as well as copying files to and from calculators and computers. Bring along the questions you have accumulated regarding the calculator and its use (or not) in specific parts of the curriculum to have them discussed and answered.

CAS in the Tas Curriculum
Using the CAS calculator as a teaching tool to introduce and consolidate specific areas of the content is becoming more common as experience with the calculator grows. Spend time in this session looking at organised activities that impact directly on curriculum content and experience the thrill of creating some of these learning experiences for yourself. Direct student involvement and engagement in the activity will be the focus of the tasks.
